

SPATIAL ANALYSIS OF FOOD DESERTS

A GIS-based investigation of food accessibility and socioeconomic disparities in **Indianapolis**.

Food Desert Overlay Analysis

Where are food deserts concentrated in Indianapolis, and how do income and food accessibility patterns contribute to their spatial distribution?

Key Finding

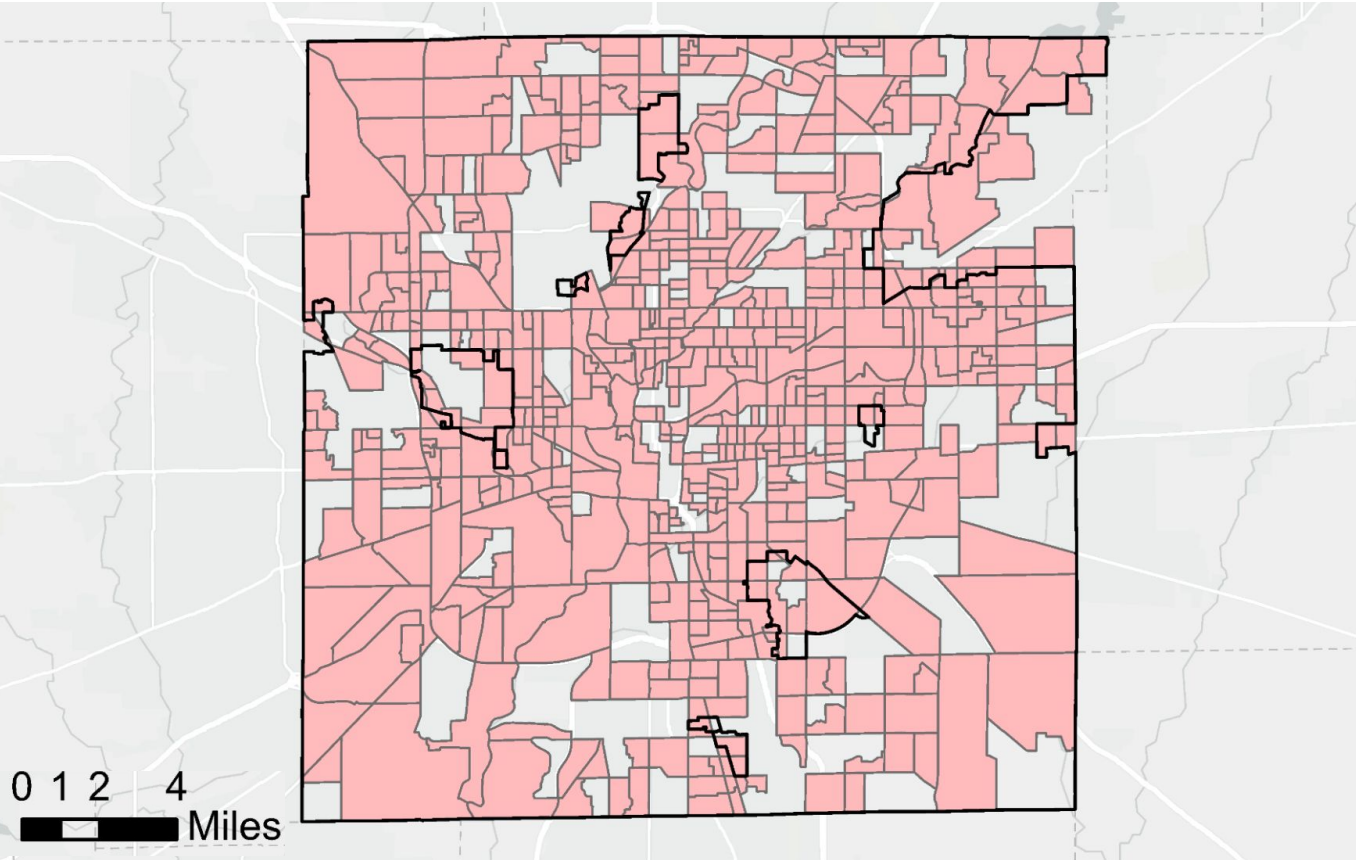

Food deserts emerge where low-income neighborhoods overlap with limited geographic access to grocery stores, highlighting areas where residents may experience reduced access to healthy and affordable food.

UNDERSTANDING THE DRIVERS OF FOOD DESERTS

Examining the spatial relationship between income and food accessibility across Indianapolis.

LOW-INCOME CENSUS BLOCK GROUPS

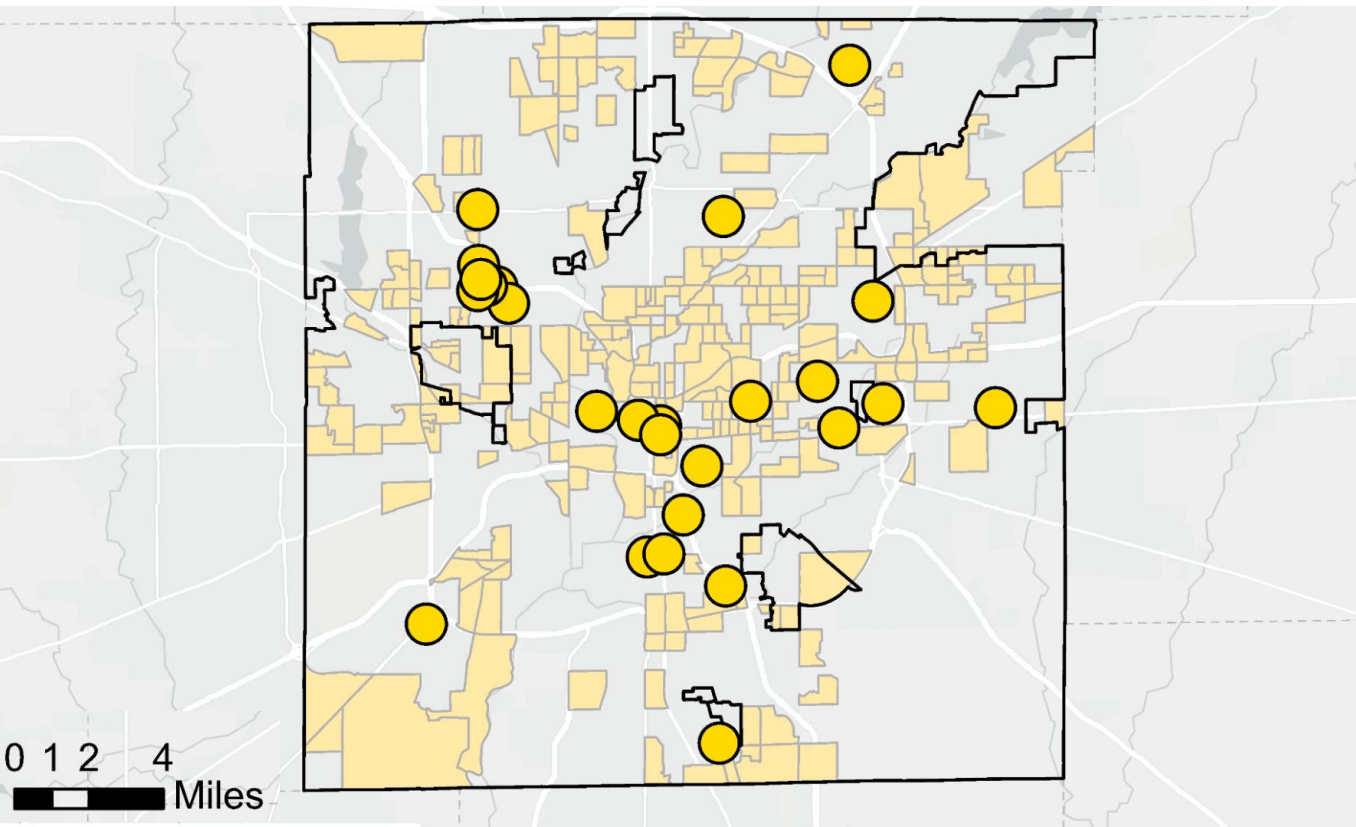

Spatial Pattern

Low-income Census Block Groups are concentrated across central Indianapolis, forming continuous clusters throughout several neighborhoods.

Insight

Income patterns highlight neighborhoods where affordability may limit access to healthy food.

LOW-ACCESS CENSUS BLOCK GROUPS

Spatial Pattern

Low-access neighborhoods occur across both urban and peripheral areas, revealing geographic differences in proximity to grocery stores and healthy food options.

Insight

Limited grocery access reflects the combined influence of transportation, distance, and neighborhood connectivity.

HOW FOOD DESERTS FORM
